H. Oneywell Docket No. 30-4874 (4960) B. Ingham Docket No.: H9910-0305

IN THE CLAIMS

- 1. (Previously Presented) A method to prill a shear-thinnable mixture comprising the steps of:
 - a) providing a molten first component;
 - b) mixing at least a second component with said molten first component;
 - c) reacting said components at a temperature and for a time sufficient to form a shear-thinnable mixture having a viscosity, whereby the viscosity decreases with increased shear rate;
 - mechanically agitating said shear-thinnable mixture by an agitator in a prill head, wherein essentially the entire liquid volume in said prill head is swept by said agitator to shear thin said shear-thinnable mixture; and permitting said shear-thinned mixture to flow through holes in said prill head under the influence of a force selected from the group consisting of static pressure and centrifugal force.
- (Original) The method according to claim 1 wherein said shear-thinnable mixture is a
 melt slurry.
- 3 (Previously Presented) The method according to claim 1 wherein said first component is ammonium nitrate and said second component is ammonium sulfate.
- 4. (Original) The method according to claim 1 wherein said shear-thinnable mixture comprises no more than about 2 weight percent water.
- 5. (Original) The method according to claim 3 wherein said shear-thinnable mixture fur ther comprises micronutrients.
- 6. (Original) The method according to claim I wherein said prill head is one of a rotating bucket with a stationary blade, a stationary bucket with rotating scrappers and blades, and

B intham Docket No.: H9910-0305

an agitated pressurized nozzle assembly.

- 7. (Previously Presented) The method according to claim 1 wherein said prill head is wiped with surface-wiping blades.
- 8 (Previously Presented) The method according to claim 7 wherein said first component is ammonium nitrate and said second component is ammonium sulfate.
- 9. (Original) The method according to claim 7 wherein said shear-thinnable mixture comprises no more than about 2 weight percent water.
- 10. (Original) The method according to claim 7 wherein said shear-thinnable mixture fur ther comprises micronutrients.

Claims 11-14: Cancelled.

- 1.5. (Previously Presented) The prilling method according to either claim 3 or claim 8, wherein the reaction time is about 10 minutes to about 15 minutes.
- 16. (Previously Presented) The prilling method according to either claim 3 or claim 8, wherein the reaction temperature is at least about 180°C to about 200°C.
- 17. (Previously Presented) The prilling method according to either claim 3 or claim 8, wherein the ammonium nitrate and the ammonium sulfate are present in equimolar amounts.
